Dear Hiring Manager,

As the first and only DevOps Engineer in my current company, I bring increased efficiency of the Software Team by building and maintaining the Continuous Integration Continuous Deployment (CI/CD) pipeline to enable significantly more code-to-deployment efficiency and reduced interval time. Additionally, I was also crucial in designing the microservice-based cloud architecture of the entire software system that is currently being build, and complying the design according to SDLC requirements, and Google Cloud Platform (GCP) standards.

Aside from my current internship as a DevOps Engineer from August 2022 to June 2023 (expected, 1 year internship) at Icon City, Petaling Jaya, I'm an international student doing Bachelor of Computer Science at Taylor's University and I will be graduating this year (August 2023). I am majoring in Artificial Intelligence (AI), and minoring in Financial Technology (FinTech).

I am applying to this position because after reading the job description I was confident with the roles and responsibilities that are required for this position. I want to contribute my knowledge, experience, fast-learning mindset, and dedication, as well as to be a part of this family to experience the work culture.

I want to apply to this position to start working right after my internship ends and I graduate (August 2023). With this, I am waiting for you response in hopes of your valuable feedback(s).

Thank you,

Yours sincerely,

Alister Animesh Baroi
